

Let us know your views by rating the following statements from 1 (lowest) to 10 (highest).

How would you prioritize these statements given 100 total points?

Any questions for the presenters?

Are you going to send us the slide sets?

How can Living Shoreline Initiatives help our local governments and private citizens to achieve greater resilience to Sea Level Rise?

How to educate the general public

Better planning and common sense regulations

How can other universities and organizations get involved?

Why aren't you giving more focus to natural adaptations for sea rise? Why not bridge areas that ebb and flow, such as wetlands, instead of building dikes?

Why not provide financial incentives to communities that ARE being proactive about sea rise?

In worst case scenarios of SLR, what are contingency long-term planning action plans being considered?

Our County Council Chair does not believe in Sea Rise, so how can we convince or even educate politicians who think this way?

Any questions for the presenters?

What are the new technologies for manufacturing for resilience?

Why is agriculture not considered?

Do we know of any communities that either taxes their vulnerable properties higher to address future mitigation opportunities or restrict a portion of their existing taxes (TIF like CRA) for such vulnerability assessment initiatives and/or mitigation

How difficult to do feel it is to educate the the upper levels of our state government when we have a President who denies climate change?

On duty to maintain- is that the responsibility of the elected officials or the administrative staff (departments) to take the lead, or does it matter?

How do we utilize the current election year to increase awareness of sea level rise and the need for resiliency efforts.

What types of regional stormwater models are being considered and / or already being worked on?

Can buying property out a less expensive solution in St. John's than maintaining the road? Is that acceptable alternative for cities?

Now that beach front property owners in Florida "own" sand to average high water mark, does that change maintenance and liability standards too?
